

ABSTRACT OF THE DISCLOSURE

There is provided a printing apparatus and method which is capable of easily printing question data and answer data in a predetermine format enabling relevancy therebetween to be visually recognized. Stored data including question data and answer data which are stored in a manner correlated with each other are read out. The question data and the answer data are printed on a print medium, based on the stored data read out, in a predetermined format enabling relevancy between the question data and the answer data to be visually recognized.
